

Solution Requirements

Date	15 March 2026
Team ID	SWTID-2026-5550
Project Name	legalease:AI-powered legal document generator
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can register or sign in securely using email/password or an approved identity method.	High
2	Authorization levels	Define user roles and permissions so users can create, edit, save, and download their own documents.	High
3	External interfaces	Connect to an AI language-model service and secure document storage/database as required.	High

		Integrate with an AI language-model service for generating and refining legal-document content.	High
4	Transactions processing	Accept user inputs, validate required fields, send structured prompts to the AI service, and return the generated document.	High
5	Reporting	Provide a document preview and allow users to download the generated document in a usable format.	Medium
6	Business rules, etc.	Apply required document-generation rules, required fields, clause consistency, and user-specified document type constraints.	High
7	Compliance to laws or regulations	Handle personal/legal information according to applicable privacy requirements and clearly state that output is AI-generated.	High
8	Other	Allow users to edit generated content, regenerate sections, save drafts, and export the final document.	Medium

1	Performance & Speed	Generation and preview should respond promptly for normal requests.	Target: document generation and preview within 10 seconds for a typical request.
2	Scalability	Support growth in users, documents, and stored drafts without major redesign.	Target: support at least 100 concurrent users in the initial deployment.
3	Security & Data Privacy	Protect user-provided legal information with access control, secure storage, and safe data handling.	Target: encrypted data in transit and at rest; no unauthorized access.
4	Reliability & Availability	Handle service failures gracefully and preserve saved drafts where possible.	Target: 99% monthly availability for the application.
5	Usability & Accessibility	Provide a simple guided interface with readable content, clear validation, and accessible controls.	Target: core document-generation flow usable on desktop and mobile.
6	Other	Keep the system maintainable and allow document templates or AI providers to be updated independently.	Target: modular codebase with documented configuration and deployment steps.
