Project Title Legalease: AI-powered legal document generator

Maximum Marks 5 Marks

Project Proposal (Proposed Solution) report

The proposal aims to simplify and accelerate legal document creation using artificial intelligence. It addresses the difficulty of drafting structured legal documents, reducing manual effort while improving consistency, clarity, and accessibility for users. Key features include AI-assisted document generation, requirement-based drafting, and editable document output.

Project Overview

Objective	The primary objective is to develop an AI-powered legal document generator that creates structured legal documents from user-provided requirements, making document drafting faster, clearer, and more accessible.
Scope	The project covers requirement collection, AI-assisted legal document generation, document structuring, editing, and generation of usable digital document formats through a web-based application.

Problem Statement

Description	Manual legal document drafting can be time-consuming and difficult for users without legal drafting expertise. Generic templates may not match the user's specific requirements, leading to repeated editing and uncertainty about document structure and wording.
Impact	Addressing these issues can reduce drafting effort, improve document consistency, provide faster access to structured drafts, and make the document-generation process more convenient for users.

Proposed Solution

Approach	Employing generative AI techniques to understand user requirements and generate structured legal documents, creating an adaptable document-drafting workflow that supports users from input collection through document output.
Key Features	• AI-powered legal document generation. • Requirement-based document drafting. • Structured and editable document output. • User-friendly web interface for creating and managing drafts.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware	Computing Resources CPU/GPU specifications, number of cores	Development system / cloud compute suitable for AI application development
	Memory RAM specifications	8 GB RAM minimum
	Storage Disk space for data, models, and logs	Adequate SSD storage for application files, generated documents, models, and logs
Software	Frameworks Python frameworks	FastAPI
	Libraries Additional libraries	OpenAI API/SDK, python-docx, PyPDF2, PostgreSQL driver, and supporting Python libraries
	Development Environment IDE	Visual Studio Code / GitHub Codespaces
Data	Data Source, size, format	User-provided legal requirements and document templates; generated documents in DOCX/PDF formats
